

### Silicone Cover for LT & DBU Transmitters

This tough silicone cover protects the LT & DBU transmitters from moisture and dust. The pliable material and the two-part design make it easy to install and remove. Cutouts for the antenna and input jack provide a snug fit.

Indicators and buttons are visible through the cover. The buttons can be pressed through the cover for basic operation.

#### Step 1

Slide the cover over the housing.

#### Step 2

Pull the top panel cover fully over the top of the transmitter, making sure the appropriate antenna and jack holes are covered. The top panel cover should **overlap** the panel cover. The silicone on silicone contact in the overlap keeps dust and moisture from reaching the transmitter housing.

**IMPORTANT**  
The top panel cover must **OVERLAP** the housing cover.
