

### Silicone Cover for LMb Transmitter

9 September 2019

This tough silicone cover protects the LMb transmitter (and legacy versions) from moisture and dust. The pliable material and the two-part design make it easy to install and remove. Cutouts for the antenna and input jack provide a snug fit.

Indicators and buttons are visible through the cover. The buttons can be pressed through the cover for basic operation.

#### Step 1

Pull the top panel cover fully over the top of the transmitter, making sure the appropriate antenna and jack holes are covered.

#### Step 2

Roll on the bottom panel cover. The bottom panel cover should **overlap** the top panel cover. The silicone on silicone contact in the overlap keeps dust and moisture from reaching the transmitter housing.
